Full-Stack Engineer | AI/LLM Integration | Journalism & Civic Tech

EXPERIENCE

Software Engineer, The Atlantic

New York, NY (2021-Present)

Audio Platform & Content Infrastructure

- **Led audio platform development** improving sitewide play rate from 3% to 7%, building custom React/TypeScript player with first-party analytics serving both web and native mobile platforms
- **Architected Collections system** replacing legacy taxonomy (sections, channels, projects) with flexible CMS powering 200+ pages. Authored RFC, delivered 66+ PRs across frontend suite, increasing ad revenue potential and content discoverability
- **Technical Product Lead for AI Watchdog**: coordinated 8-week cross-functional sprint to launch high-visibility destination (7.3K+ visitors). Leveraged Elasticsearch to query 100M+ creative works efficiently

AI/LLM Product Development

- **Developed Atlantic Amplified**: human-in-the-loop AI tool for editorial production using GPT-4/Claude with Next.js, FastAPI, and Vercel AI SDK, exploring responsible AI integration for journalism
- **Built LLM content generation platform** with RAG and prompt optimization, implementing supervised AI workflows with human validation for editorial oversight
- Streamlined newsletter publishing workflow from 60 minutes to 10 minutes through automation; collaborated with Editorial on experimental visual storytelling for podcasts (Holy Week, Scripts)

Technical Lead, Touchpoint (Contract)

New York, NY (2024-2025)

- **Built 0→1 legal tech product** on nights/weekends: workflow orchestration platform connecting enterprise legal data providers using Inngest, LLMs, and graph networking to analyze corporate legal departments
- **Secured enterprise customer adoption** as early paying customer, validating product-market fit and gaining direct experience with AI tool enterprise sales and implementation
- Implemented WebSocket and polling-based real-time synchronization with SOC2 security compliance for sensitive legal data

Engineering Intern & Contractor, New York Times

New York, NY (Summer 2019; Summer 2020-Winter 2021)

- **Contributed to Pulitzer Prize-winning COVID-19 data collection**, maintaining systems processing data from hundreds of international sources and refactoring scrapers for improved accuracy
- Created Python package for FOIA document processing, streamlining investigative journalism workflows for reporters

Digital Product Director, The Amherst Student

Amherst, MA (2018-2021)

- Led platform migration from Drupal to Next.js with ML for archival retrieval, growing readership to 10,000 monthly users
- Achieved 85-90% newsletter read rates through data-driven optimization; implemented AWS/CodeBuild CI/CD with minimal downtime

EDUCATION

Amherst College — B.A. in Architectural Studies and Computer Science (2021)

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Python, React, Next.js, Node.js, FastAPI, Django, GraphQL

AI/ML: OpenAI GPT-4, Anthropic Claude, Vercel AI SDK, RAG, Prompt Engineering, Human-in-the-Loop Workflows

Databases & Infrastructure: PostgreSQL, MongoDB, Redis, Elasticsearch, AWS, Docker

Domain Expertise: Audio Technology, Content Management Systems, Editorial Workflow Tools, AI for Journalism

PROJECTS

Personal Portfolio — dmomplaisir.com

Custom portfolio showcasing full-stack development and design capabilities, built with Astro and deployed to GitHub Pages
